About Philomath Networks

At Philomath Networks Pvt. Ltd., we specialize in organizing transformative events for schools, organizations, and communities, fostering a culture of exploration, innovation, and growth. From expert-led workshops to competitive events, we create immersive learning experiences that inspire and empower individuals to go beyond boundaries. Partner with us to bring impactful learning to your community!

Partner With Us

Collaborate with Philomath Networks to bring innovation, engagement, and excellence to your institution or organization. Let's work together to create an ecosystem of lifelong learning and impactful experiences!

What Sets Us Apart?

Comprehensive Learning Approach – We blend academic, non-academic, and skill-based experiences through workshops, competitions, expert-led sessions, and immersive programs tailored to real-world applications.

End-to-End Event Management – From conceptualization to execution, we ensure seamless organization of competitions, tech fairs, hackathons, leadership programs, and customized training sessions that align with institutional goals.

Industry & Academic Bridging – We foster collaborations between institutions, corporates, and experts, ensuring that participants gain practical exposure, networking opportunities, and insights into emerging trends beyond traditional education.

Customizable & Scalable Programs – Whether it's a school-level science fest, university hackathon, corporate leadership training, or specialized certification courses, we tailor our events to meet the unique needs of every institution.

Proven Impact & Engagement – Our interactive approach ensures higher participation, deeper learning retention, and enhanced skill development, making every event a transformative experience.

Course Overview

▶ Course Objective

This course provides a comprehensive introduction to cloud computing, covering cloud architecture, services, and deployment models. Participants will gain hands-on experience with leading cloud platforms like AWS, Azure, and Google Cloud, learning to deploy, manage, and secure cloud-based applications. Through practical labs and case studies, they will develop skills in virtualization, networking, security, automation, and cost optimization. By the end of the course, learners will be able to design scalable cloud solutions, implement cloud security best practices, and prepare for cloud-related roles in the industry.

▶ Course Outcome

- ✓ Master cloud architecture, platforms, and services.
- ✓ Automate infrastructure with IaC and DevOps tools.
- ✓ Deploy and manage secure cloud-based applications.
- ✓ Optimize cloud performance, cost, and scalability.
- ✓ Implement networking, security, and identity management.
- ✓ Gain hands-on experience to prepare for cloud-related job.

Training

Modules

The training modules provide a hands-on learning experience in core cloud computing concepts, virtualization, and cloud-native development. Participants will begin with cloud fundamentals, deployment models, and service models using platforms like AWS, Azure, and Google Cloud. They will then explore cloud security, networking, and automation to enable scalable and efficient cloud solutions. Each module is structured around real-world scenarios, ensuring practical skill development. Additionally, learners will gain insights into best practices for optimizing cloud performance, managing costs, and enhancing overall infrastructure efficiency.

▶ **Module 1: Cloud Computing Fundamentals**

- Understand cloud computing models (IaaS, PaaS, SaaS).
- Learn about deployment models (Public, Private, Hybrid, Multi-cloud).
- Explore virtualization and containerization in cloud environments.
- Understand cloud benefits, use cases, and industry adoption.
- Get familiar with key cloud providers (AWS, Azure, GCP).
- Learn the basics of cloud cost management and pricing models.

▶ **Module 2: Cloud Platforms & Architecture**

- Introduction to AWS, Azure, and Google Cloud.
- Understand cloud architecture components and design principles.
- Learn about compute services (EC2, Azure VM, GCE).
- Explore serverless computing (AWS Lambda, Azure Functions).
- Learn about cloud networking fundamentals.
- Set up basic cloud environments with hands-on labs.

▶ **Module 3: Networking & Security in Cloud**

- Understand Virtual Private Cloud (VPC) and subnetting.
- Learn about firewalls, security groups, and access control.
- Implement Identity and Access Management (IAM) policies.
- Explore cloud encryption and security best practices.
- Learn about DDoS protection and compliance standards.
- Hands-on practice with securing cloud infrastructure.

Training Modules

As the course progresses, participants will explore infrastructure automation with Terraform, monitoring with CloudWatch and Prometheus, and security best practices in cloud environments. The final modules focus on multi-cloud strategies, cost optimization, and compliance, ensuring learners are industry-ready to implement scalable, secure, and efficient cloud solutions. By the end of the training, participants will have the confidence to design, deploy, and manage cloud architectures in real-world environments. This comprehensive approach will prepare them for cloud computing roles in leading tech industries.

Module 4: Cloud Storage & Databases

- Explore cloud storage options (S3, Blob, Cloud Storage).
- Understand object storage vs. block storage vs. file storage.
- Learn about relational databases (RDS, Cloud SQL, Azure SQL).
- Explore NoSQL databases (DynamoDB, CosmosDB, Firestore).
- Implement backups, snapshots, and disaster recovery.
- Hands-on experience with managing cloud databases.

Module 5: Automation & DevOps in Cloud

- Understand Infrastructure as Code (IaC) with Terraform.
- Implement CI/CD pipelines in the cloud.
- Learn about Kubernetes and cloud-native orchestration.
- Explore cloud monitoring and logging (CloudWatch, Azure Monitor).
- Implement cloud automation with Ansible and CloudFormation.
- Hands-on lab for deploying and managing cloud applications.

Module 6: Cloud Deployment & Optimization

- Understand cloud scalability and high availability.
- Learn about auto-scaling and load balancing.
- Implement cost management and resource optimization.
- Explore multi-cloud and hybrid cloud strategies.
- Learn about cloud governance and compliance frameworks.
- Capstone project: Deploying a real-world cloud solution.

Training Schedule & Format

The training schedule is structured as a 6-day intensive Cloud Computing workshop, providing a hands-on learning experience. Each day focuses on a key cloud module, starting with foundational concepts and progressing to advanced topics like cloud security, automation, networking, and multi-cloud strategies. The workshop includes interactive sessions, hands-on labs, and real-world cloud problem-solving to reinforce learning. Participants will work on mini-projects and practical assignments daily, ensuring a strong grasp of cloud platforms and best practices. The final day is dedicated to a capstone project, performance optimization, and a certification assessment, equipping learners with industry-ready cloud computing skills.

Day	Module	Focus Area	Duration
Day 1	Cloud Computing Fundamentals	Models, Services, Virtualization	5hrs
Day 2	Cloud Platforms & Architecture	AWS, Azure, GCP	5hrs
Day 3	Networking & Security	VPC, Firewalls, IAM	5hrs
Day 4	Cloud Storage & Databases	S3, Blob, RDS, NoSQL	5hrs
Day 5	Automation & DevOps in Cloud	IaC, CI/CD, Monitoring	5hrs
Day 6	Cloud Deployment & Optimization	Scalability, Cost, Compliance	5hrs

Through hands-on exercises and case studies, participants will develop essential cloud computing skills, explore best practices, and tackle real-world cloud deployment challenges. The workshop includes live demonstrations, guided projects, and interactive labs to enhance learning. A collaborative format encourages discussions, troubleshooting, and peer learning. By the end, attendees will have a strong cloud computing foundation, enabling them to deploy applications, optimize cloud resources, and manage scalable cloud infrastructure effectively.

How to Get Involved

Steps to Enroll in Training Programs

- Contact us via email or phone.
- Share your preferred course, schedule, and any specific requirements.
- Our team will review your request and confirm the booking.
- You will receive confirmation details via email or call .
